

# Report of the Fourth Pennsylvania May Count

May 13, 1995

by Alan C. Gregory

The fourth annual North American Migration Count was conducted on May 13, 1995, again in conjunction with the observance of International Migratory Bird Day. Birders in 32 Pennsylvania counties participated this year. Five counties joined the count program this year, but the total number of participating counties rose only by two as three counties which participated last year dropped out for the 1995 count. The number of participating birders (including stationary observers and feeder watchers) in Pennsylvania reached 628, an increase of 216 participants over the 1994 count. The total cumulative number of birds counted across the state this year reached 142,102 individuals, a substantial increase over the 113,764 birds recorded in 1994 and considerably higher than the 107,193 birds recorded in 1993, the second year of the NAMC. A total of 220 species was reported statewide in the 1995 count, somewhat lower than 1994's 226.

The top five counties in numbers of participants for 1995 were: *Franklin*, 56; *Indiana*, 50; *Westmoreland*, 46; *Philadelphia*, 40; and *Chester*, 37.

Those counties which participated in 1994 but not this year are *Forest*, *Montgomery* and *Wyoming*. New to the count for 1995 are *Chester*, *Clearfield*, *Lebanon*, *Lehigh*, and *Potter* counties. Thus, while the county-level participation trend continues upward, the "curve" has just about flattened out. It is heartening, however, to see a tremendous increase in the number of individual participants.

I continue to welcome ideas from readers on how to increase participation in the NAMC. The NAMC remains an all-volunteer program. There is no participation fee and all costs associated with the count program, such as postage, paper supplies, envelopes, and copying charges, are paid for by participants at all levels. It is truly a grass-roots program and is deserving of participation by all organized birding clubs and Audubon chapters.

While many Audubon chapters and bird clubs conduct fund-raising bird counts on the same day as the NAMC, it is possible — with just a bit more effort — to record data in the field for the NAMC while also conducting a

birdathon. Please contact me for more information about the data collection aspect of the NAMC. For information about the methodology employed in the field for the NAMC, I refer readers to the report of the second annual count (*Pennsylvania Birds*, 7(2), 34-38).

Finally, the NAMC is an outstanding opportunity for groups of knowledgeable birders to spread the message of bird conservation — and the Partners in Flight program in particular — to the lay public. Only by heightening the public's knowledge about the importance of migratory birds in particular and wildlife in general can we expect that same public to join us in conserving birds and their habitat in Pennsylvania.

## WEATHER

The weather on count day favored birders, but no significant weather event (i.e., a cold front) immediately preceded the count day. Some northern counties reported early morning temperatures in the mid-40s. Temperatures remained on the cool side throughout the afternoon. Nick Kerlin in *Sullivan* reported an afternoon high of 60°, while Bob Ross in *Tioga* reported 60° at noon. The pre-dawn low in *Luzerne* count was 50°, with an afternoon high of 70°. In *Indiana* to the west, observer Marcy Cunkelman reported "perfect" observing conditions in her detailed notes about a Philadelphia Vireo sighting. Margaret Higbee, the *Indiana* compiler, reported a pre-dawn low of 42°, with an afternoon high of 78°. In the southcentral region, the weather story was very similar. *Dauphin* compiler Grace Randolph listed a pre-dawn low of 50°, with an afternoon high of 75°. And in the southeast quadrant of the state, Herbert Houston in *Chester* reported a pre-dawn low of 50° and an afternoon high of 74°. It was cooler in *Wayne* in the Poconos region, where co-compilers Voni and Joe Strasser reported a pre-dawn low of 42° and an afternoon high of 65°. The Strassers started the day under foggy conditions.

By the afternoon hours, some light cumulus covered most of the state. Winds were predominately out of the south, but at moderate speeds.

As I write this report, all of Pennsylvania is under drought

conditions. No significant rainfall has fallen in southern *Luzerne* since early August and the dryness evident across the region really began appearing last winter. Very few significant snowstorms affected the Northeast and by early March what little snowpack left by winter storms had already melted. What effect will the drought have on wintering birds? What effect will it have on the state's crop of mast? The upcoming Christmas Bird Count and next spring's May count will, perhaps, help answer these questions.

## THE TOP-20

The 20 most abundant birds reported this year were:

1.	American Robin	10,143
2.	European Starling	7,948
3.	Common Grackle	6,630
4.	Red-winged Blackbird	6,311
5.	Canada Goose	4,511
6.	Gray Catbird	4,273
7.	American Crow	3,748
8.	Barn Swallow	3,454
9.	American Goldfinch	3,435
10.	Song Sparrow	3,201
11.	Common Yellowthroat	2,941
12.	Mourning Dove	2,920
13.	Chipping Sparrow	2,891
14.	House Sparrow	2,649
15.	Blue Jay	2,616
16.	House Finch	2,566
17.	Northern Cardinal	2,520
18.	Ovenbird	2,435
19.	Yellow Warbler	2,361
20.	Rock Dove	2,337

Pushed off the top 20 list this year were: **Tree Swallow**, **Chimney Swift**, **Brown-headed Cowbird** and **Red-eyed Vireo**.

## NOTES ON SELECTED SPECIES

One **Horned Grebe** was reported in *Wayne*. A **Least Bittern** was a nice find in *Butler*. Also among the heron species, a **Snowy Egret** was observed in *Bedford*. A lingering **Oldsquaw** was a nice find in *Cumberland*.

Eleven **Bald Eagles** were reported, with reports well distributed across the state's northern tier: *Wayne* (1), *Tioga* (1), *Sullivan* (1), *Dauphin* (3), *Cumberland* (1), and *Butler* (4).

Observers reported 16 shorebird species, including: **Semipalmated Plover** (21), **Killdeer** (733), **Greater Yellowlegs** (43), **Lesser Yellowlegs** (62), **Solitary Sandpiper** (203), **Spotted Sandpiper** (372), **Upland Sandpiper** (3), **Semipalmated Sandpiper** (5), **Least Sandpiper** (137), **White-rumped Sandpiper** (a well-described individual in *Cumberland*), **Pectoral Sandpiper** (2), **Dunlin** (34), **Short-billed Dowitcher** (1 in *Centre*), **Common Snipe** (18), and **American Woodcock** (69).

A lone **Black Tern** was reported from *Cumberland*. This species continues to show signs of a drastic decline throughout the East.

Eight **Barn Owls** were noted, 3 in *Franklin* and 5 from *Bucks*. A **Short-eared Owl** was a nice, but not unexpected, find in *Venango*. A lone **Northern Saw-whet Owl** turned up in *Centre*. Thirty-five **Red-headed Woodpeckers** were tallied across the state.

**Olive-sided Flycatchers**, another species thought to be in trouble in the Northeast, were found in *Indiana* (1), *Cumberland* (1), and *Chester* (2). Two **Yellow-bellied Flycatchers** were discovered — one in *Elk* and the other in *Clarion*.

**Carolina Wrens** continued their recovery from the severe winter of 1993-94, with 200 tallied across the state, a solid increase from the 118 reported statewide in the 1994 NAMC. A lone **Sedge Wren** was an exceptional find in *Westmoreland*.

NAMC observers tallied 37 warbler species. Among the warbler reports were a few individuals of the two Golden-winged/Blue-winged hybrids, the "**Lawrence's**" and "**Brewster's**."

A single **Summer Tanager** was tallied, the lone individual reported from *Venango*. A **Blue Grosbeak** was a nice find in *Chester*.

#### A CORRECTION

The 1994 report credited *Luzerne* observers with 142 species. But a Winter Wren was erroneously left off the tables. Thus, *Luzerne* birders tallied 143 species in 1994.

#### ACKNOWLEDGEMENTS

Thanks to all the participants — from feeder watchers to field workers — for helping make this program work. Thanks to each county compiler for generating excellent coverage and supporting the program. Thanks to

Monica Gregory for helping computerize the mountain of data.
